

PRODUCT ANNOUNCEMENT

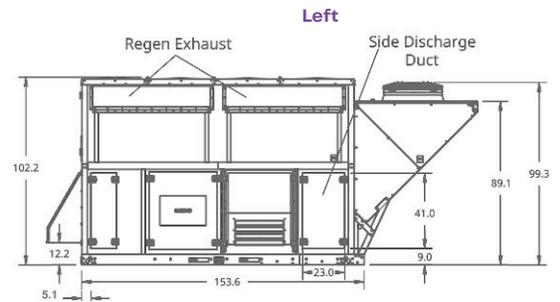

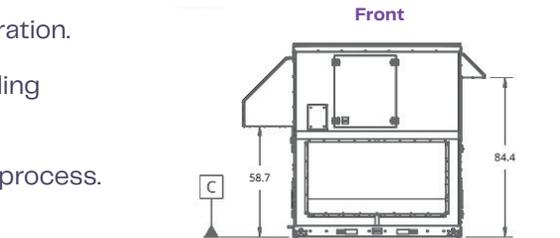

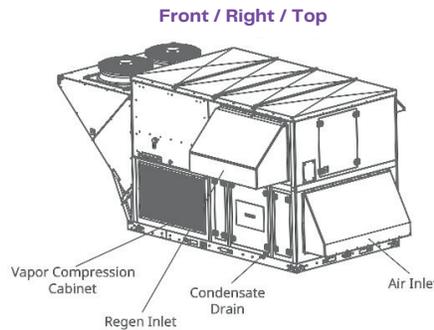

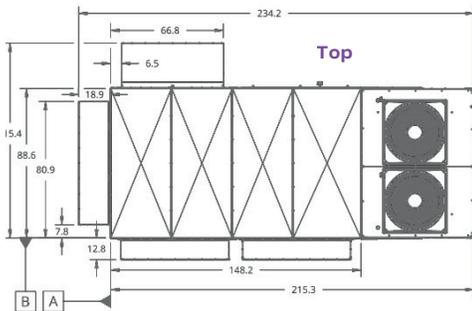

The ADB with heat pump reduces total height by 2.5 feet and trims 7.5 feet off the base compared to standard ADB models with no impact to performance.

WHY IT'S IMPORTANT

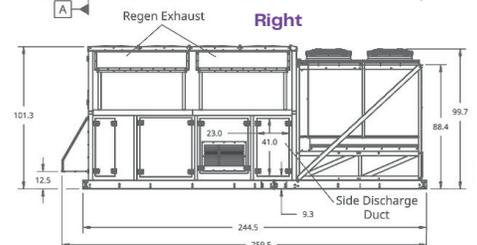

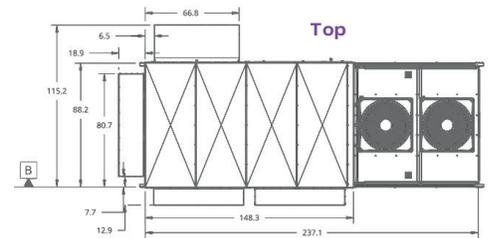

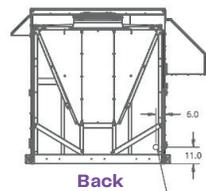

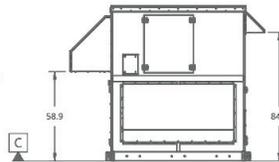

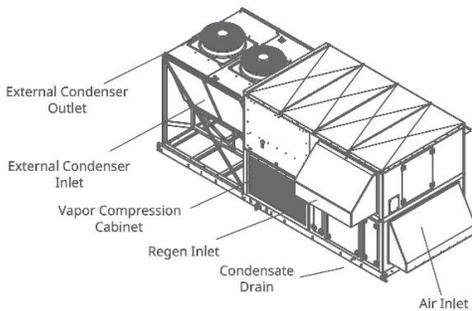

- A smaller base translates to reduced curb size and a smaller roof penetration.
- At under 15 feet tall, the unit avoids additional ASCE 7-10 snowdrift loading requirements, simplifying compliance.
- The result is streamlined structural engineering and a smoother design process.
